EDUCATION

University of California, Irvine

Master of Computer Software Engineering; Current GPA: 3.7 / 4.0

Irvine, CA

Sep. 2024 – Dec. 2025

University of Indianapolis

Bachelor of Science in Finance(Joint Program); GPA: 3.7 / 4.0

Indianapolis, IN

Sep. 2019 – Jun. 2023

NingboTech University

Bachelor of Science in Finance; Average Score: 88 / 100

Ningbo, China

Sep. 2019 – Jun. 2023

RESEARCH INTERESTS

Human-Computer Interaction · Mobile Health Systems · Personal Informatics
Self-tracking & Feedback Design · Behavior & Emotion Support in Recovery

EXPERIENCE

Clinical Informatics Research Assistant

UCI Health

Oct. 2025 – Present

Irvine, CA

- Develop conversational AI interfaces to streamline clinical knowledge retrieval for medical learners, reducing information-seeking burden.
- Design learning analytics dashboards to identify competency gaps and inform adaptive strategies.
- Collaborate with physicians on workflow integration, evaluation metrics, and pilot study protocol.
- Contribute to usability study planning using think-aloud and observational methods for early evaluation.
- Propose outcome measures to assess knowledge-support effectiveness and workflow impact in real contexts.

Software Development and Research Intern

UC Irvine, School of Nursing

Jun. 2025 – Present

Irvine, CA

- Collaborate with nursing, public health, and informatics teams to design and develop mobile health interventions for underserved perinatal women, preparing for real-world pilot deployment and evaluation.
- Translate clinical recommendations and behavior-change principles into user-friendly app features that support adherence and reflection.
- Assist in planning usability studies, including scenario design and participant experience mapping.
- Define behavioral engagement metrics to support future evaluation of intervention adherence and impact.
- Support pilot-study preparation by developing usability evaluation measures, defining engagement analytics, and designing alert and onboarding workflows to enable real-world behavioral assessment.
- Develop secure data handling pipelines and deployment strategies designed to support eventual clinical evaluation in community health settings.

Investment Research Intern

CreditEase—Peakvest Private Equity Fund

Jul. 2022 – Sep. 2022

Beijing, China

- Conducted an in-depth sectoral analysis of China's critical care rehabilitation industry, synthesizing over 80 policy documents, academic papers, and clinical reports.
- Led fieldwork and interviews at two regional hospitals in Zhejiang Province, gathering qualitative insights from hospital directors, medical group executives, physicians, nurses, caregivers, patients, and family members to assess care delivery models and operational challenges.
- Applied Python and R for data cleaning, visualization, and trend analysis on large datasets (over 5,000 entries) across healthcare subdomains.
- Produced a 90+ page internal research report to inform impact investment in China's critical care rehabilitation sector, focusing on end-of-life care facilities. Synthesized national policy analysis and field insights to support socially beneficial infrastructure development for vulnerable end-of-life patients and their families.

PROJECTS

Happy Hearts System | *Research Engineer & UX Study Designer*

June. 2025 – Present

- **Designed and engineered** a modular mobile health system integrating education, surveys, wearable-informed feedback, and secure communication for high-risk perinatal women.
- **Developed** patient-facing mobile UI and clinician-facing web dashboard; implemented Spring Boot backend with **JWT-secured APIs** and role-based access.
- Operationalized behavior-tracking and engagement metrics with **real-world alert workflow** to support clinician escalation.
- **Aligned** system design with maternal-health research goals, including **usability study preparation** and **adherence analytics**.
- **Coordinated** cross-team workflows, deployment pipelines, and data governance to support **future community-health pilot** evaluation.
- **Research outcomes:** Internal usability evaluation in progress; pilot deployment planned under UCI Nursing study.
- **Publication Plan:** *APHA 2025 Health Informatics Poster abstract submitted; manuscripts in preparation for CHI 2025 Late-Breaking Work and JMIR Formative Research.*

Clinical AI Chatbot | Full-Stack Engineer & UX Study Designer

Oct. 2025 – Present

- Designed conversational AI interfaces to streamline clinical knowledge retrieval for medical trainees, reducing information-seeking burden during real-world practice.
- Developed workflow-aware prompt design with RAG integration to ensure responses reflect up-to-date clinical guidelines and standardized competency frameworks.
- Designed learning analytics dashboards to visualize concept mastery, user uncertainty signals, and question–topic clustering for adaptive feedback.
- Collaborated with physicians to define integration workflows, evaluation metrics, and usability study protocol grounded in cognitive load theory.
- **Research outcomes:** Initial prototype under internal evaluation with physician collaborators; pilot usability study planned within UCI Health.
- **Publication Plan:** Future manuscripts planned targeting CHI Late-Breaking Work / AMIA Informatics Summit upon completion of pilot usability evaluation.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, SQL, MATLAB, R

Frameworks and Libraries: React, React Native, Node.js, Spring Boot, Django, Tailwind CSS, FastAPI, Express.js

Tools: Git, Docker, AWS, Prisma, MongoDB, MySQL, Figma
